

EAT40006 – Client Meeting Minutes

Meeting Date: 14 October 2025

Time: 7:00 pm – 7:30 pm

Type: Client Meeting (Sprint 4 Progress and Final Preparation)

Client: Mr. Alex Jaimes Castillo

Attendees:

- Haritha Manuja Perera
 - Thenura Kuruppuarachchi
 - Chrishelle Anthoneyz
 - Senupama Deshapriya – absent
-

1. Purpose of Meeting

To present the updated 3D model and colour modifications, receive feedback from the client, discuss the integration of the model into the mobile app, confirm dashboard data plans, and discuss upcoming final deliverables, Expo participation, and project handover schedule.

2. Discussion Summary

2.1 Model Updates and Colour Enhancements

- Haritha demonstrated the updated 3D model with newly added colours based on previous client feedback.
 - The client confirmed that the updated colour scheme looked good and aligned with his expectations.
 - Alex appreciated that the colour differentiation clearly defined different compartments and sections of the model, improving the visual clarity for presentation and in-app viewing.
 - The client approved the progress and did not request additional visual changes at this stage.
-

2.2 Animation Functionality

- Alex inquired whether the team managed to implement animation into the 3D design.
- Haritha explained that while animation was completed in SolidWorks, real-time animation within the mobile app would be difficult to achieve due to performance and compatibility

constraints.

- However, the team plans to include a separate animation tab in the mobile app, which will demonstrate the working process step-by-step, helping users understand the composting system.
 - Alex agreed with this approach, acknowledging that the animation tab would effectively simplify the demonstration process.
-

2.3 Integration into Mobile App

- The client confirmed that the current GLB model version will be integrated into the mobile app.
 - He instructed the team to save and send the final version of the 3D model once all visual and animation elements are finalised, so it can be uploaded and linked with the dashboard.
 - The integration will help visualise the sensor data readings (temperature, moisture, and gases) alongside the 3D composting model.
 - Alex noted that when the dashboard is ready, it should display real-time readings per compartment (active phase, curing phase, and others), allowing users to identify each zone's conditions clearly.
-

2.4 Dashboard and Data Display

- Alex emphasised the importance of completing the dashboard before final submission, mentioning that it must include:
 - Temperature readings for each phase (Active, Curing, Storage)
 - Moisture and Gas data visualisation
 - Clear labels for all compartments and sensor values
 - He mentioned that once the dashboard and sensor displays are complete, the app will be well-balanced in both functionality and presentation.
 - The client was satisfied with the model's progress and stated that "we are achieving something valuable by the end of this project."
-

2.5 Final Submission and Expo

- Alex informed the team that the final public Expo will be held on the 20th of November 2025.
 - He explained that:
 - The university will provide each team a table and chairs to showcase their projects.
 - The LIDA project will feature multiple displays: one for the app demonstration and one for the 3D printed prototype.
 - The client's other student teams (e.g., those handling machine learning modules) will also showcase their components during the Expo.
 - He encouraged the team to attend the Expo in person, interact with visitors, and explain the project concept to the audience.
 - Alex will not be physically present at the Expo due to work commitments but mentioned he would coordinate and assist the team with preparation materials in advance.
-

2.6 Expo Preparation Materials

- Alex stated that all presentation materials and prototypes are stored in Room AD112 at the university.
 - The team will be able to:
 - Use the 3D printed composting unit model and posters from AD112 for the Expo display.
 - Collect any printed materials such as banners and signage with the LIDA and Leader logos.
 - After the Expo, the team must return all materials to Room AD112 and place them neatly in the same location.
 - Alex requested the team to take photos during the Expo and share them with him afterward for record-keeping.
-

2.7 Final Handover and Project Completion

- The client suggested that the next week's meeting (around 28 October) would likely be the final client meeting to finalise the project handover.

- He confirmed that once the handover is complete, the project will officially conclude before the Expo.
 - Alex appreciated the team's consistent progress and collaboration, stating that the project is nearly complete and on track for successful submission.
-

3. Key Points Highlighted by the Client

1. Colour modifications are approved – no further design changes needed.
 2. Animation tab will be added to the app to simulate system operation (non-real-time).
 3. The final GLB model must be saved, exported, and integrated into the app.
 4. Dashboard should display sensor data for temperature, moisture, and gases by compartment.
 5. Expo scheduled for 20 November 2025 — team expected to attend and present.
 6. Presentation materials (3D print, posters) available in Room AD112.
 7. All materials must be returned after the Expo.
 8. The final client meeting will occur around 28 October 2025 for full handover.
 9. Client expects final model, app integration, and dashboard ready by next week.
-

4. Decisions Made

- The recoloured 3D model is approved.
 - Animation tab will be created for simplified demonstration.
 - Final GLB version to be submitted for app integration.
 - Dashboard and sensor linkage will be completed by next meeting.
 - Team will attend the Expo and coordinate materials with client.
 - Next meeting scheduled for project handover on 28 October.
-

5. Action Items

Task	Responsible	Deadline
------	-------------	----------

Finalise coloured 3D model and animation tab	Haritha & Thenura	20 Oct 2025
Export and share GLB model for app integration	Haritha	21 Oct 2025
Develop and test dashboard sensor display	Chrishelle & Senupama	25 Oct 2025
Collect presentation materials from AD112	Thenura	18 Nov 2025
Attend and present project at Expo	All Members	20 Nov 2025
Return materials to AD112 post-event	Thenura	21 Nov 2025

6. Next Meeting

Date: 28 October 2025

Time: 7:00 pm – 7:30 pm

Agenda: Final project review, app integration update, and client handover.
